Health Care Solutions

## “Dante changes the aspect of health tourism”

There is a brand new channel for those seeking the best professionals to solve their health or aesthetic problems. Dante Organization Inc., which has signed important projects in the field of organization and tourism for many years, brings a new perspective to the health sector with Dante Healthcare Solutions application. Dante Healthcare Solutions is bringing together patients seeking treatment and healthcare professionals in this platform, where treatment information is also available and offers a holistic service that covers the whole process from accommodation to guidance, from physician advice to treatment.

Turkey is among the world's leading countries in health tourism. Every year, many local and foreign people are knocking the door of the physicians and hospitals all their aesthetic and health problems, especially in Istanbul. The number of visits for aesthetic reason to Turkey is reaching substantial numbers.

Dante Healthcare Solutions creates a platform that brings together the health professionals and their treatments by creating significant advantages on budget for those who travel for health tourism.

Dante Organization Inc. General Manager Seda Ünal says that such services are not sufficiently organized and not done by professionals so far, also explains as;

“Turkey is a country with great potential in terms of health tourism. Middle Eastern and European country people who are in need of health choose to be treated in Turkey with both aesthetic and health reasons. Because specialists in Turkey are creating very good results with reasonable budgets. Among these reasons, patients who come to Turkey do not have enough information about how or which doctor or hospital they will choose to go. In fact marketed health services in Turkey are not detailed about the professionals and their educations. As Dante Organization Inc., we are a company that has gained a lot of experience in the organization sector by signing many successful works for many years. With the Dante Healthcare Solutions web platform that we have created in our organization, we aim to eliminate the problems in this field and to open a clear way for health tourism. With the past experiences we have, the structure we have created at our side, to those who want to come to Turkey as aesthetic or health purposes is giving a holistic consultancy services. We are solving all the hotel, travel and guidance services from a single center according to the demand of the patients who will arrive. With this holistic structure, people who are planning to come for health tourism will only take care of their treatments they need from the experts, not have to deal with other details about travelling. They will take their treatments like having a holiday and return to their country.

In order to benefit from these services and have information about our doctors and their treatments they can visit our website at [www.dantehcs.com](http://www.dantehcs.com) and contact us about their research and interest.”
